

ARLINGTON, Va., Jan. 24, 2011 /PRNewswire/ -- Pepco Energy Services, Inc., a subsidiary of Pepco Holdings, Inc. (NYSE: POM) and a leader in energy savings performance contracting, has reached agreement to design and construct a \$2.3 million photovoltaic (PV) project for the Department of Energy at the Germantown, Maryland, campus. The project will be implemented under the U.S. General Services Administration's Utility Energy Services Contract (UESC) with Pepco.

The 10-month construction project award, which began in October 2010, includes a 300 kW solar PV ground-mounted array and a 52 kW solar PV carport array with a Class II electric car charging station. Both the ground array and the carport array will be operational by July 2011.

This solar renewable power project uses monocrystalline PV modules manufactured by the Federal Prison Industries (FPI). FPI PV modules convert solar radiation into electricity through high-efficiency, state-of-the-art module design and components, and they are customized to the application. The FPI modules have an industry-leading 25-year warranty.

"Pepco Energy is pleased to implement the Department of Energy's photovoltaic project," said John Huffman, President and Chief Executive Officer of Pepco Energy. "We are excited to work with the Department of Energy on this important step forward advancing the commercialization of electric vehicles."

Once installed, this project will produce significant renewable energy and reduce the Department of Energy's greenhouse gas emissions. It will also effectively remove approximately 350 kW of energy demand off the grid daily when the system is at full design and operation.

For information on how we can help your agency deploy renewable technologies, please call John Dukes, Director of Federal Projects, at (703) 253-1775 or visit our Web site for a complete list of services.

About Pepco Energy Services, Inc.

Pepco Energy Services, Inc., a wholly owned subsidiary of Pepco Holdings, Inc. (NYSE: POM), provides commercial, institutional, government and industrial customers with competitive energy efficiency services, including renewable energy and combined heat and power.
